2 Introduction: Fixed and random effects In tutorial 1, we talked about how we could use the linear model to express the relationships in our data in terms of a function.

A very basic tutorial for performing linear mixed effects

In this section we solve linear first order differential equations, i.e. differential equations in the form $y' + p(t)y = g(t)$. We give an in depth overview of the process used to solve this type of differential equation as well as a derivation of the formula needed for the integrating factor used in the solution process.
