reported application of the PDSA method in healthcare. Application of PDSA cycles was assessed against key features of the method, including documentation characteristics, use of iterative cycles, prediction-based testing of change, initial small-scale testing and use of data over time.

Application: Iterative method is used for solving non-symmetrical Linear systems in the Simulation of Semiconductor processing. The concept of a strict extremum can be defined. Application: It can be computed in finite fields.

The Newton-Raphson method is a method for finding the roots of equations. It is particularly useful for transcendental equations, composed of mixed trigonometric and hyperbolic terms. Such equations occur in vibration analysis. An example is the calculation of natural frequencies of continuous structures, such as beams and plates.
