Oral rehydration therapy (ORT) is a type of fluid replacement used to prevent and treat dehydration, especially that due to diarrhea. It involves drinking water with modest amounts of sugar and salts, specifically sodium and potassium. Oral rehydration therapy can also be given by a nasogastric tube. Therapy should routinely include the use of zinc supplements.

Oral rehydration therapy - Wikipedia

Basic research advances fundamental knowledge about the world. It focuses on creating and refuting or supporting theories that explain observed phenomena. Pure research is the source of most new scientific ideas and ways of thinking about the world.

1. Introduction. Drawbacks to intravenous administration, including extravasation of drug or blood, catheter infections, and thrombosis can be prevented by administering the drug orally, making the oral delivery the most popular route of administration 1. Nonetheless, oral administration is limited by problems related to physico-chemical properties of the drug, including poor solubility, low ...
