Goals & Responsibilities of Aging Research \$ Study of aging is a multi-discipline process \$ What are the models for studying aging?? \$ Any theory of aging must encompass ALL organisms, from single cells to complex humans. The question is: What do all aging organisms have in common?? \$ All aging organisms are able to undergo differentiation.

Biology of Aging Aging is accompanied by gradual changes in most body systems. Research on the biology of aging focuses on understanding the cellular and molecular processes underlying these changes as well as those accompanying the onset of age-related diseases.

It is a complicated integration of mathematics, neurobiology, molecular biology, biophysics, physical chemistry, and genetics, and this textbook covers them all. In doing so, it is the first textbook that covers the topics of aging from a biological perspective and not the traditional biomedical one.

Robert Arking's Biology of Aging is an introductory text to the biology of aging which gives advanced undergraduate and graduate students a thorough review of the entire field. The mass of data related to aging is summarized into fifteen focused chapters, each dealing with some particular aspect of the problem.

It may be expected that the patterns observed in normal aging between these different cellular and systemic responses would be further perturbed or accelerated in the syndrome of frailty. Future investigations targeting these areas will provide the data necessary to test these hypotheses related to the biology of aging.
