Microorganisms found in aerated and facultative ponds are more diverse than those observed in many other biological treatment processes, due to the diverse growth environments present. Both aerobic and anaerobic bacteria are involved as well as algae and some higher life forms such as protozoans, rotifers, daphnia, and insect larvae. The aerobic bacteria that occur are similar to those found ...

ABSTRACT. Biopreservation systems in foods are of increasing interest for industry and consumers. Bacteriocinogenic lactic acid bacteria and/or their isolated bacteriocins are considered safe additives (GRAS), useful to control the frequent development of pathogens and spoiling microorganisms in foods and feed.
